The Darby ranch plan has everything a family would need. The foyer with a stepped ceiling detail leads directly into the open living of the family room, dining room and kitchen spaces. This makes entertaining with friends and family easy, keeping everyone together and not separated in different rooms. The cozy fireplace and the stepped ceiling detail in the family room adds to the ambiance of the space. Why not take the entertaining outdoors by adding the optional lanai off the dining room; everyone loves the outdoors in the summer time. The mud room, with the adjacent first floor laundry room, allows for direct access from the two-car attached garage to the kitchen for unloading the groceries quickly. There is also an additional one-car attached garage which would be perfect for that classic car you don't use daily, or storage for all the items for the kids' activities.

When your day is winding down, the owner's suite, with a stepped ceiling, is waiting for you. Take a soak in the tub of the secluded owner's bath. Have a lot of clothes? The long extended walk-in closet will be able to handle that. There is also room for your kids or guests in the two additional bedrooms, which share a full bath.
